Since amendments has not been entered, the above arguments are not considered at this time. 2. Examiner disagrees with Applicant's statement that Examples 1-12 contain representative evidences that propoxy substituted polymer has a better moisture absorbtion (CTE) properties compare to ethoxy substituted one. As shown in previous Office Action, for ethoxy substituted polymers CTE values are within the range of-7.7 to 58 ppm/C, whereas for propoxy substituted ones the values are within the range of 11 to 66 ppm/C. It is clear that the above ranges are overlapped significantly. (see Table 2 of the Specification). ...
